DEEMED TO BE UNIVERSITY UNDER SECTION 3 OF UGC ACT, 1956
COIMBATORE CAMPUS

INSTITUTION'S INNOVATION COUNCIL
(Ministry of Education Initiative)

GENESIS

Genesis Ideathon: Final Presentation

Team ID: *GEN26-A0H-I017*

Team Name: *MindMesh*

Domain: *Digital Technology ,AI and Cyber Security*

Amrita Vishwa Vidyapeetham, Coimbatore Campus

Date: 11th October 2026

Presentation Outline

1. Problem Statement
2. Problem Understanding
3. Existing Gaps & Challenges
4. Our Proposed Solution
5. Technical Approach
6. Innovation & Uniqueness
7. Feasibility & Scalability
8. Cost for Product
9. Use Cases
10. Impacts and Benefits
11. Sustainable Development Goals
12. Individual Member Contribution

Problem Statement

Lack of awareness and guidance prevents people from identifying and effectively using suitable AI tools.

Problem Understanding

- Students, teachers, working professionals, small business owners, and beginners who want to use AI tools but lack proper awareness and guidance
- Lack of knowledge about available AI tools, difficulty identifying the right tool for a specific task, and limited access to simple tutorials and practical guidance.
- Users waste time searching for suitable tools, struggle to use AI effectively, miss opportunities to improve productivity, and may depend on others to complete tasks that AI could simplify

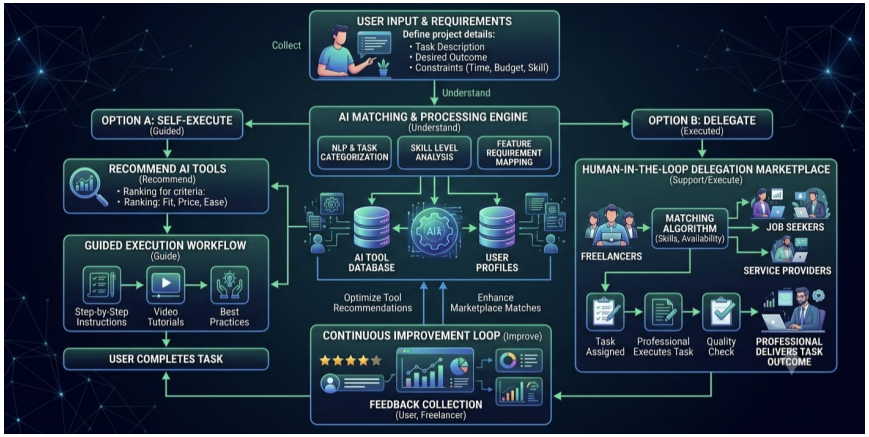

Existing Gaps & Challenges

- Too many AI tools, but no clear guidance to identify the right tool for a specific task.
- Users struggle to compare tools based on features, suitability, ease of use, and reliability
- Lack of step-by-step guidance makes beginners unsure about how to use AI tools effectively and confidently.

Our Proposed Solution

- AI Tool Recommendation and Guidance System An intelligent guide that reduces AI tool overload by recommending the right AI tool for the right task, with clear guidance on how to use it
- The user explains what they want to do, the system figures out which tools fit the task, and then it explains why and how to use them.
- Our solution transforms an overwhelming number of AI choices into a simple, guided decision-making process, helping users save time and use AI more effectively The right AI tool for the right task, without the confusion."

Technical Approach

figureSystem Architecture Diagram

Explain how the system components work together.

Tech Stack

Frontend:html, css steamlit

Backend: :python,Jason/csv file, Fast API

Database:SQLite,csv file

AI/ML, APIs, or Hardware: [Add if applicable]

Innovation & Uniqueness

- This is different because it focuses not just on providing AI tools, but on helping users understand how to use the recommended AI tools. Relevant information is organized in one place. Providing expertise service for people who seeks for an AI assistance in their task.
- This system is well suited to the problem because the availability of numerous AI tools often creates confusion, making it difficult for users to identify the right tool .Skill-Level-based recommendations,Alternative Tool Finder makes it more apt for this job.
- It is not only about recommending the right AI tool, but also explaining how to use it to users and showing AI experts for people who need the assistance of AI experts in their task.

Feasibility & Scalability

- **Feasibility:**:Resources: Website, database, AI APIs, cloud/hosting and development tools. Steps:We can start with building a simple website using existing AI tools and APIs. Then we add the AI tools and task categories, create recommendations and usage guidance.
- **Scalability:** We can keep adding new AI tools and categories. It can support more users as the platform grows.
- **Risks:** AI tools and their features keep changing. Regular updates will be needed to keep the information accurate

Cost for Product (Optional)

- Development or hardware cost: [Add estimate]
- Hosting or maintenance cost: [Add estimate]
- Estimated total: [Add amount and currency]

Use Cases (compulsorily 3 use cases must be there)

- Use case 1: Business owners struggle to choose between AI tools for writing advertisements, creating graphics, editing videos, and managing social media. System:Suggests suitable tools for captions, promotional designs, and short videos, explaining why each tool fits and how to use it. Value: Helps small businesses plan marketing activities without needing expertise in every tool.

- Use case 2: A user finds a suitable AI tool but discovers that an important feature requires payment. System:filters tools by free access, identifies relevant features and limitations, and recommends alternatives that match the user's needs Values: It addresses accessibility and helps users avoid wasting time on tools that do not fit their budget.

- Use case 3:A beginner wants to design a poster but doesn't know the difference between AI image generators and graphic design tools. System:Suggests appropriate design tools and explains which are better for layouts, images, and text. Value:Helping beginners choose the right AI tool for their task by providing personalized recommendations, clear explanations, and step-by-step guidance.

Impacts and Benefits

- Benefits to the Target User: Eliminates tool overwhelm by instantly matching users with the ideal AI software and offering the flexibility to either learn it themselves or delegate the task.
- Social, Economic, or Environmental Impact: Democratizes AI literacy and creates new economic opportunities for freelancers and service providers to monetize modern tech skills.
- Expected Measurable Outcome: Reduces user search and onboarding time by 50

Sustainable Development Goals (SDGs)

SDG Number	Target Number	Goal Name	Connection
4	4.4	Quality education	Helps students and beginners develop digital and AI related skills by guiding them by choose and use right AI tools
9	9.5	Industry and infrastructure	encourages innovation and the effective use of AI technologies by making AI tools easier to discover and use

Individual Member Contribution

Member	Contribution or responsibility
Trishna Sri S	Presentation Preparation
Lakshitha Kumar V M	Problem Statement Identification
Harshini V B	Identification of Research paper
Selvanisha V	Chart Work and Idea representation
